R42 Dizziness and giddiness

R43 Disturbances of smell and taste

R44 Other symptoms and signs involving general sensations and perceptions

R45 Symptoms and signs involving emotional state

R46 Symptoms and signs involving appearance and behavior

Clinical Information

Our senses of taste and smell give us great pleasure. Taste helps us enjoy food and beverages. Smell lets us enjoy the scents and fragrances like roses or coffee. Taste and smell also protect us, letting us know when food has gone bad or when there is a gas leak. They make us want to eat, ensuring we get the nutrition we need. People with taste disorders may taste things that aren't there, may not be able to tell the difference in tastes or can't taste at all. People with smell disorders may lose their sense of smell, or things may smell different. A smell they once enjoyed may now smell bad to them. Many illnesses and injuries can cause taste and smell disorders, including colds and head injuries. Some drugs can also affect taste and smell

Codes
